

# We build **reliable** connections

Accelerate network deployments with cabinets that arrive fully assembled, wired, and tested, ready for installation and rapid commissioning.

# Built for faster network deployment

Deploying network infrastructure should not depend on field assembly, missing components, or complicated integration. Netceed simplifies the process with pre-integrated cabinets that arrive fully assembled, wired, and tested, ready for fast installation and commissioning.

With more than 30 years of integration experience, Netceed engineers design cabinet solutions that support broadband, wireless, utility, and edge infrastructure deployments. Our cabinets are integrated in a climate-controlled production facility, ensuring consistent builds and reliable performance.

By completing integration ahead of time, Netceed helps customers reduce field labor, accelerate turn-up, and deploy networks faster.

## Why pre-integrated cabinets?

- Faster installation and commissioning
- Reduced on-site labor
- Consistent builds across deployments
- Fully tested before shipment
- Simplified site installation

## Accelerate network deployments from day one

Netceed cabinet integration solutions support a wide range of infrastructure applications, designed to support your preferred access platform, power architecture, and connectivity requirements. Our integration teams work closely with customers to ensure each cabinet is engineered for performance, reliability, and efficient installation in the field.

FTTH / PON Networks

Wireless Infrastructure

Small Central Offices

Edge Data Centers

Utility & SCADA Networks

Municipal & Rural Broadband

# Key advantages of cabinet integration

## Accelerate Deployment

Pre-wired and pre-tested cabinets reduce installation time and speed network turn-up.

## Fully Tested Systems

Every cabinet is assembled, integrated, and validated before shipment.

## Lower Installation Costs

Minimize field labor and eliminate costly delays during integration.

## Expert Integration

Precision cabling and professionally integrated power systems.

## Consistent Builds

Standardized layouts ensure reliable performance across sites.

## Complete Documentation

Each cabinet includes layout drawings and wiring diagrams.

## We simplify the complex

Netceed builds more than networks. We build partnerships grounded in trust, shared goals, and long-term growth. Our cabinet integration services reflect that commitment. By simplifying deployment and reducing field complexity, we help operators focus on expanding and strengthening their networks.

## Integration capabilities

Netceed cabinets are engineered to support the power, connectivity, and access solutions you specify, creating a fully configured system ready for installation. Typical integrations include:

- Access platforms and PON systems
- Fiber distribution and patching
- AC and DC power systems
- Battery backup solutions
- Environmental and monitoring systems
- Cable management and labeling

# End-to-end integration process

Netceed manages the full cabinet integration process, from design and sourcing to testing and delivery, ensuring cabinets arrive ready for rapid installation.

## Engineering Consultation

Our team works with you to understand deployment requirements and technical specifications.

## Design & Bill of Materials

Cabinet layouts and component selections are designed to support your network architecture.

## Procurement & Assembly

All components are sourced, staged, and assembled in our controlled production environment.

## Integration & Testing

Systems are wired, configured, and tested to ensure functionality before shipment.

## Just-in-Time Delivery

Cabinets arrive on site ready for rapid installation and commissioning.

## Proven Integration Expertise

- 30+ years of integration experience
- Cabinets integrated in climate-controlled facilities
- Fully tested before shipment
- Consistent builds across multi-site deployments

# We build connections
